

Please find attached the overview of complaint data for Bryn Compost

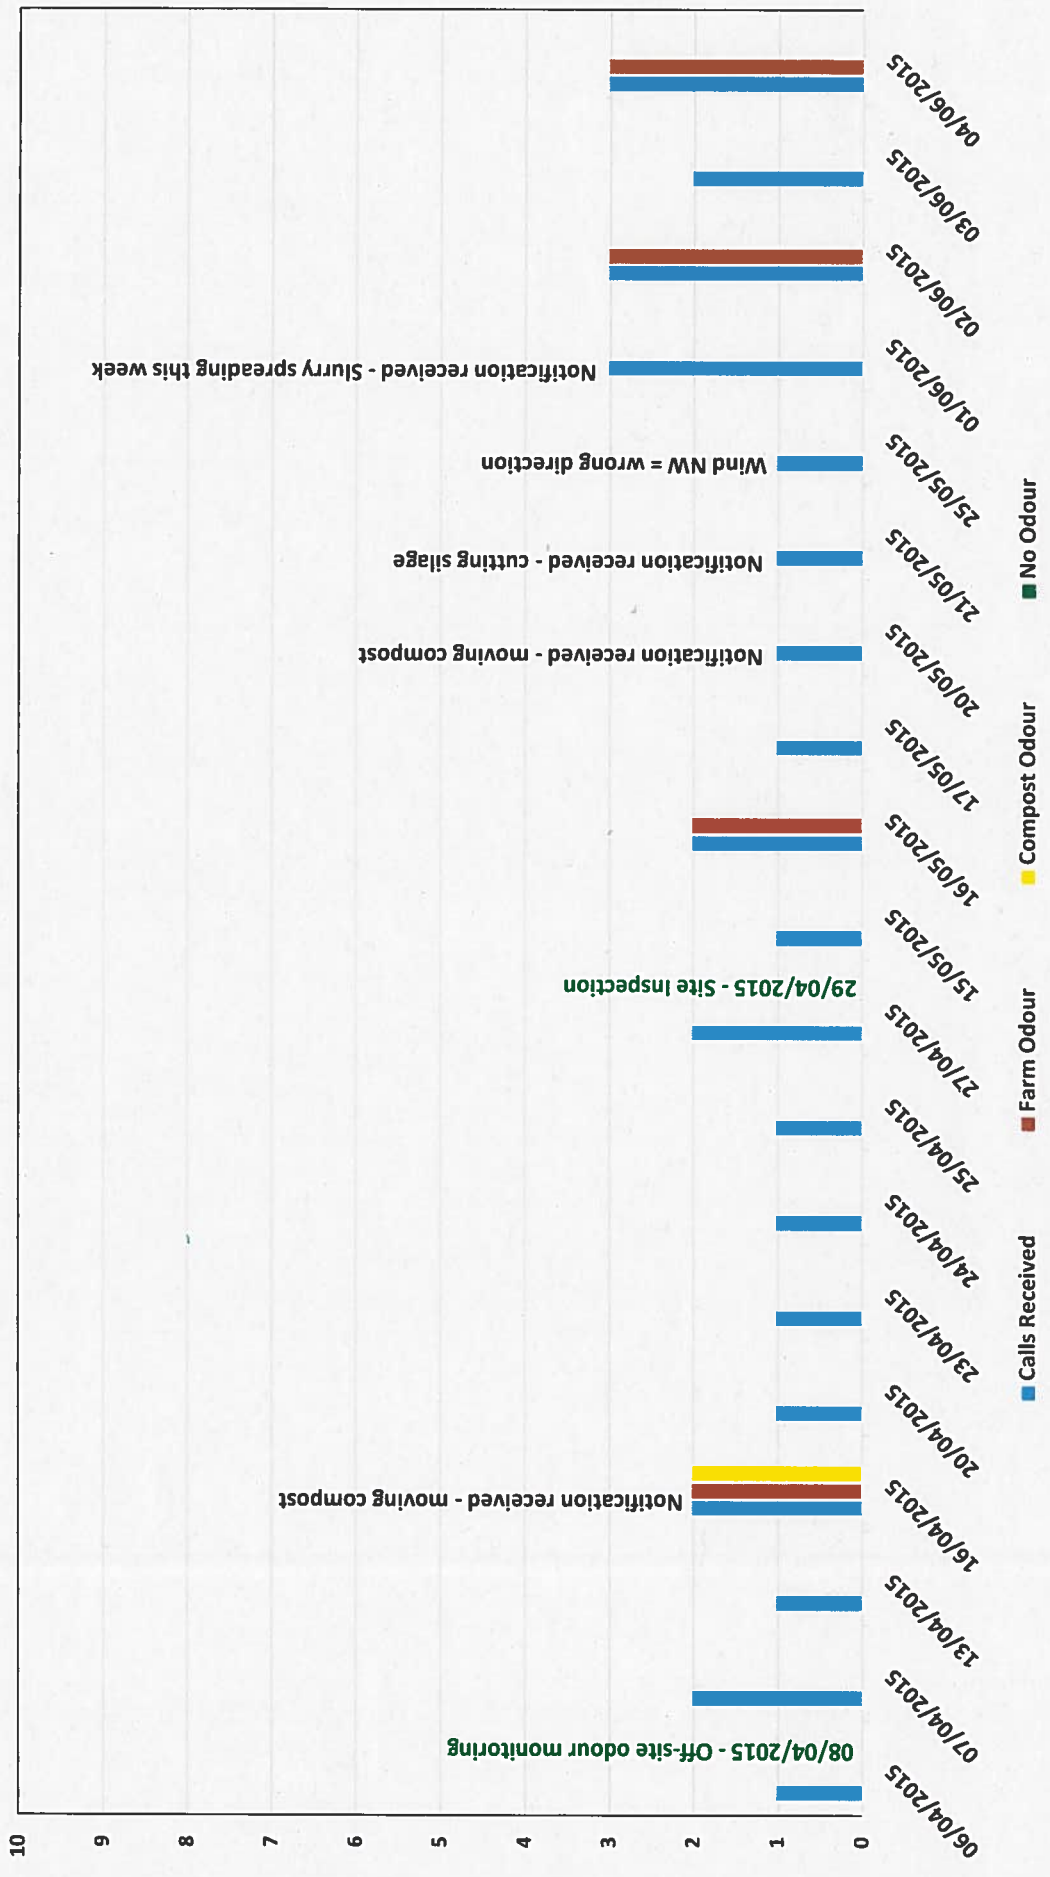

Daily Data April 2015 – July 2015.

- The chart covers 4 months and is spread over 2 pages. The number of calls received by NRW are in blue.
- If we have attended these reports there is a matching column on that date showing the odour detected (brown = farm, compost = yellow, no odour = green).
- Where the blue columns stand alone, this means we did not attend on that day.
- When we have carried out a Routine Inspection I have inserted this onto the graph for the corresponding day.
- I have only included wind information where it has been in the wrong direction to be coming from the Bryn Compost facility & Gelliargwellt Uchaf Farm area. Where there is no wind information listed assume there was potential for odours to be from the direction of the site.

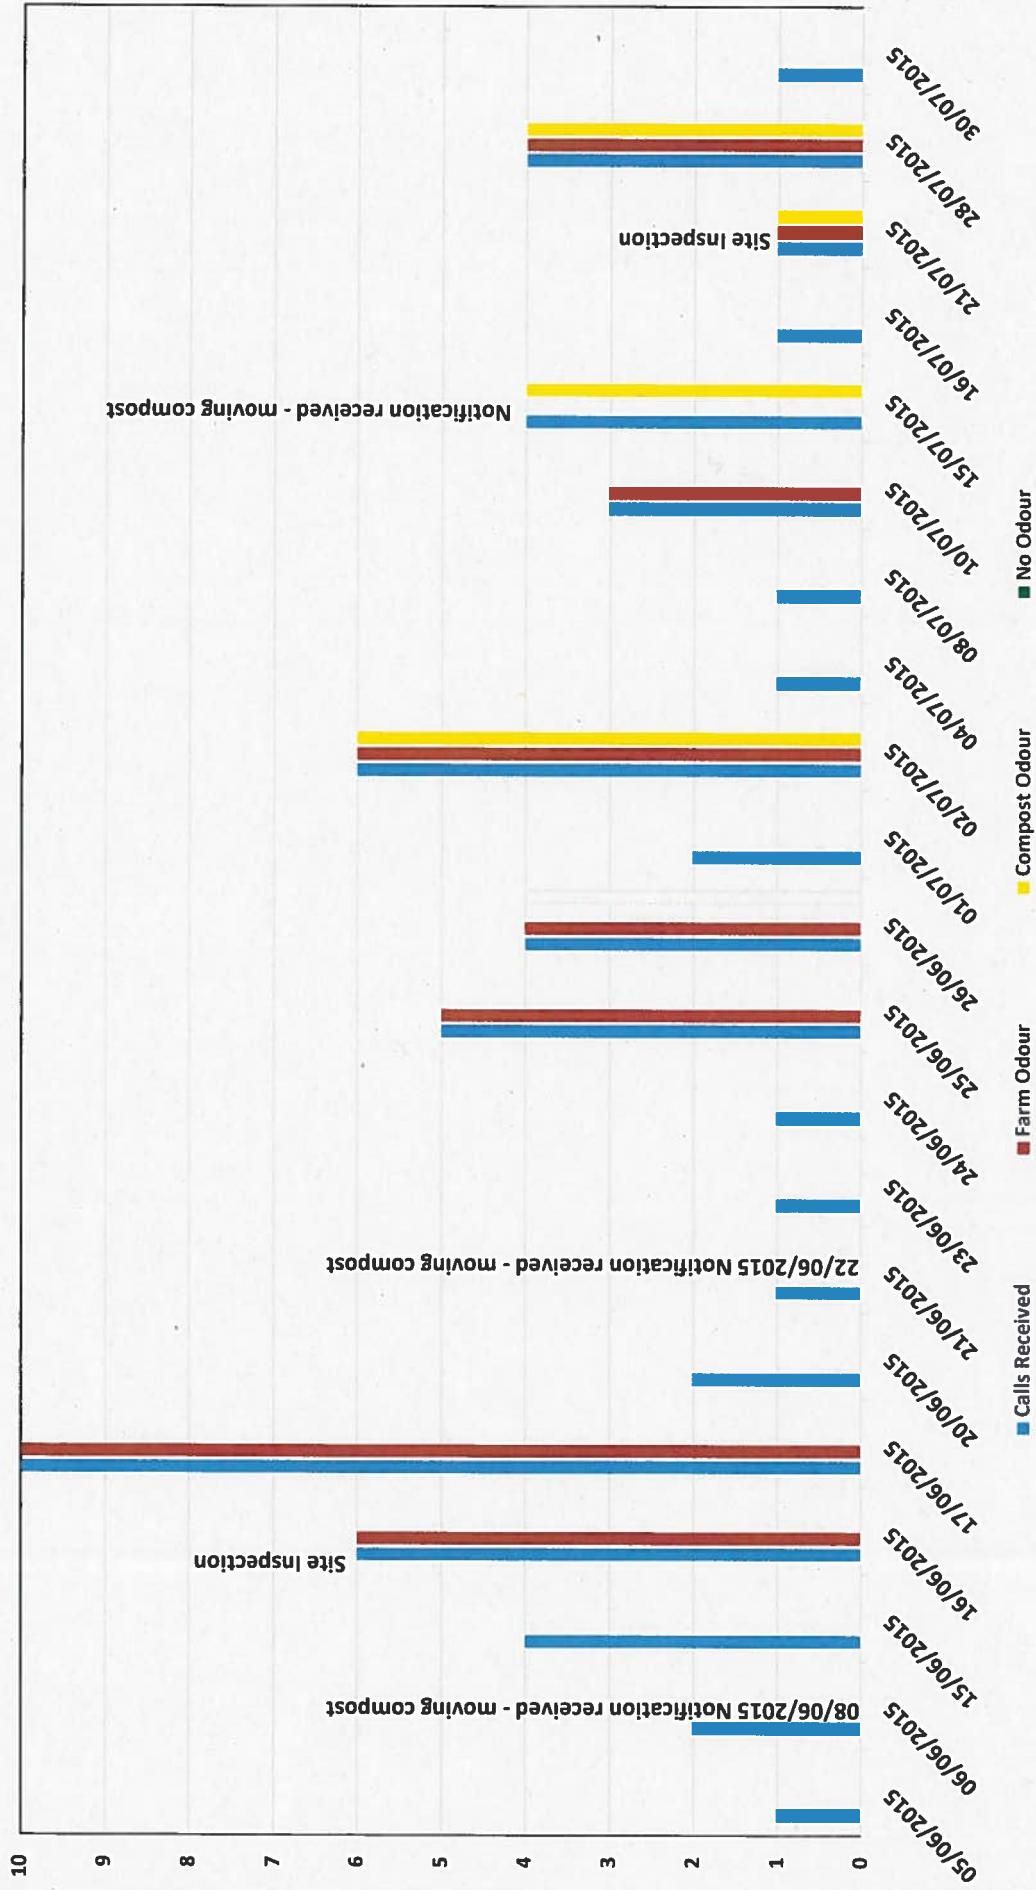

Two further graphs and map are included

- Odour Complaints for Bryn Compost July 2013 – July 2015 (inc trend line)
- No. of complainants by Location 1st January to 31st July 2015 – this is accompanied by a map showing the location of where the odours were detected. Postcodes were centralised and no specific addresses were used in the creation of this map.
