

CABINET - 16TH NOVEMBER 2022

SUBJECT: STREET LIGHTING REVIEW

REPORT BY: CORPORATE DIRECTOR OF ECONOMY AND ENVIRONMENT

--

1. PURPOSE OF REPORT

- 1.1 To update Cabinet on a high level review of street lighting undertaken in lieu of the employment of LED and Part Night Lighting which was fully introduced across the County Borough in February 2021 and the Climate Emergency that has been declared by the Council.
- 1.2 To provide Cabinet with feedback and recommendations from the Environment & Sustainability Scrutiny Committee held on 25th October 2022 and to seek a Cabinet decision on the future street lighting strategy for the County Borough.

2. SUMMARY

- 2.1 To meet the challenges of carbon reduction commitments and rising energy costs in May 2018, the Regeneration & Environment Scrutiny Committee recommended a programme to Cabinet for the installation of LED lighting and implementation of a part night-lighting (PNL) strategy. This programme was subsequently agreed by Cabinet and was rolled out across the County Borough over a 20 month period between April 2019 and February 2021. The system has been operational since with full LED infrastructure and PNL between the hours of midnight and 5.30am.
- 2.2 The Council has declared a climate emergency, so the reduction in carbon emissions is a commitment to the prevention of the long-term threat of climate change to which energy reduction plays a key role. Whilst other activities affect climate change more than lighting, it is still a very strong contribution from a single industry sector. Experts agree that we will not meet our goals for mitigating climate change without reducing the amount of Carbon being emitted into the atmosphere. Something must be done to restore the resilience of our planet to off-set the changes in our environment.
- 2.3 In addition to the experiences of climate change which are now evident across the world, Caerphilly County Borough Council's resources are inevitably finite both operationally and financially. This, combined with rising energy costs reinforced the need for a proportionate response in terms of street lighting service provision.
- 2.4 The strategy that was supported by Scrutiny and Cabinet has resulted in carbon savings of circa 2836 tonnes per annum as well as significant financial/future cost avoidance savings which are outlined in the Financial Implications at section 8 below.

- 2.5 The highways infrastructure provides local access to all road users be that for education, leisure, business or wider authority and regional connectivity. It shapes the character of an area adding to the social, well-being and quality of life in a community.
- 2.6 The total number of street lights across the Authority has increased over the last 5 years and now stands at 27,373. This increase in the street lighting asset has coincided with a period of MTFP savings, increasing energy costs and the very real threat of climate change being felt by our communities.
- 2.7 Following the implementation of the LED and Part Night Lighting Policy approved in 2018, CCBC has 22,344 street lights that are switched off at midnight for five and a half hours, 2684 illuminated signs and 711 flexible bollards. Signs continue to remain lit through all hours of darkness and bollards are no longer illuminated.
- 2.8 This report sets out the parameters of a high level review undertaken by officers which considered a number of alternative options and examined the resultant carbon and financials of each.

3. RECOMMENDATIONS

Cabinet is asked to consider the feedback from the Scrutiny Committee (including its suggested recommendations outlined in section 10 below) and the officer recommendations below and offer its views on the future street lighting strategy for the Authority.

Officer recommendations are that: -

- 3.1 The existing street lighting policy is maintained.
- 3.2 Officers continue to work with their colleagues in Gwent Police in accordance with the existing, agreed protocol relating to crime.
- 3.3 Issues relating to fear of crime are recognised by the Authority and where these issues are considered to be significant an individual response is offered through the Community Safety Partnership which will include a number of wider interventions, such as security advice and guidance.

4. REASONS FOR THE RECOMMENDATIONS

- 4.1 To ensure the Council continues to reduce its impact on the climate through maintaining its commitment to reduce carbon emissions.
- 4.2 To ensure the impacts of rising energy costs are managed effectively as part of the overall financial strategy for the Authority.

5. THE REPORT

- 5.1 To meet the challenges of Carbon reduction commitments and rising energy costs within Highways street-lighting, the Regeneration & Environment Scrutiny Committee and Cabinet endorsed a programme to implement LED installation and part night lighting between the hours of midnight and 5.30am, to all lighting, except at junctions

and in major town centres. This followed on from a 2010 initiative where the street lights on inter-urban routes connecting towns and villages were previously altered to part-night lighting from midnight to 5.30am. This inter-urban routes PNL initiative therefore operated seamlessly for a period of 10 years prior to the latest LED/PNL initiative.

5.2 In late 2021/22 the then Leader of Council gave a commitment that the street lighting strategy would be reviewed after the revised service had been operational for at least 12 months.

5.3 In undertaking any review, the following factors have been taken into consideration:-

- National data & reports on the links between removal of night lighting and crime.
- Complaints data.
- Gwent Police crime data and outcomes of regular meetings between Gwent Police and Highways Infrastructure staff.
- Data on joint work with Gwent Police in relation to the restoration of street lighting to support CCTV roll-out or temporary investigations of crime.
- Carbon & financial savings data for various alternative delivery options.

5.4 It is also important for the Scrutiny Committee to note that even though the Authority purchases all of its energy from renewable sources, carbon savings can only be accounted for against the Authority's Carbon reduction targets when there is an actual saving made (in street lighting terms the combination of LED and PNL has achieved this). Removing PNL would therefore result in additional carbon being emitted and would be detrimental to the Authority's carbon targets.

5.5 **Complaints**

In undertaking any review the number of "complaints" received by the Authority needs to be taken into consideration.

Following the implementation of the change to LED street lights and the reduction in street lighting operating hours policy, a total of 316 complaints from CCBC residents have been received (this equates to 0.18% of residents) and are itemised below:

- 147 directly against the policy.
- 86 that the LED lighting is over bright.
- 56 that the LED lighting does not provide enough illumination
- 22 that the times of operation are problematic and
- 5 following last years well publicised attack on Sarah Everhard.

5.6 Scheduled meetings are in place between Highways Managers and Senior officers from Heddle Gwent Police to review crime statistics for the hours of reduced street lighting operation. These meetings provide an effective collaboration method where the police can request temporary night time switch on where crime investigations are underway (a recent example has been the Pengam ward where a hate crime investigation was underway) or where new CCTV infrastructure is being introduced which requires permanent night lighting (a recent example of this is Rhymney). To date there is no associated link that has been established between the occurrence of crime and the reduction in street lighting operating hours policy. The

graph below provides an indication of crimes by hour of day for the period July 2020 to June 2021 (ie: pre, during and for 4 months post PNL introduction).

Crimes by hour of day – July 2020 to June 2021

5.7 In undertaking the review, officers have considered 4 potential options in addition to the status quo (i.e. lights switched off in residential areas and inter urban routes between midnight and 5.30am) prevailing. All of these additional options involve the employment of “dimming” technology (in the form of a central management system or CMS) to centrally control LUX levels.

5.8 Central Management System (CMS) and Dimming

A CMS allows for the unlimited control of the street lighting equipment from a central point via a computer. In general, all CMS’s allow for the collection of data from individual lamps giving the switch times, energy use and operating status. Variable levels of dimming would also be possible on lanterns equipped with electronic gear. No energy or carbon dioxide savings would result directly from the installation of remote monitoring but increases in energy use and emissions would be dependent on the control settings selected.

5.9 If a CMS was supported for introduction, all street lights would require the installation of a CMS node. Although 4989 lanterns already have older CMS capability, to implement dimming of all LED lanterns these nodes would also require upgrading with a supply, installation and set up cost of **£1,640,000**

- 5.10 To enable the 2684 illuminated signs to operate via CMS would cost an additional **£129,000.**

There are 7,400 lanterns with LED gear trays installed in around 2010 that are not compatible with CMS dimming and these would also require upgrading at a cost of **£1,645,000.**

The purchase and installation of additional base stations would be required to ensure full radio coverage across the borough. The service provider – (Telensa) would be required to undertake a feasibility study of the actual number, but indications suggest at minimum an additional 32 base stations would be required at a cost to supply and install of **£112,000.**

An annual maintenance fee of **£39,640.00** would also be applicable.

- 5.11 **In summary the installation of a CMS would be circa £3.5m.**

- 5.12 Following installation of a CMS, it is assumed that the 4941 lanterns located at junctions, conflict areas and roundabouts will remain on at full output, as will the 2684 illuminated traffic signs and that the 5,368 street lights located on inter urban routes could be altered to allow for dimming regimes.

- 5.13 For the street lighting system to remain within compliance of BS5489 Requirements for road lighting, the lantern output can be reduced subject to highway use and primarily the vehicular traffic flows. As such data indicates that it would be possible to reduce the classification of street lighting subject to the following operating periods:

- 100% of lantern light output (lumens) dusk to 19.00.
- 75% of lantern light output (lumens) 19.00 to 21.00
- 50% of lantern light output (lumens) 21.00 to 00.00
- 25% of lantern light output (lumens) 00.00 to 05.30

- 5.14 The options examined by officers resulted in various carbon and financial impacts and are outlined in the table below.

Review Options Compared to Status Quo

Option	Description	Carbon Impact	Financial Impact/Payback
1.	<ul style="list-style-type: none"> • Normal Lighting to 7pm • 7pm to 9pm dim to 75% • 9pm to midnight dim to 50% • Midnight to 5.30am dim to 25% 	Emission of additional 154tpa of carbon	<ul style="list-style-type: none"> • Additional energy cost of £53,000pa. • No payback on £3.5m CMS investment.
2.	As option 1 but lights switched off between 2am & 4am.	Emission of additional 33tpa of carbon	<ul style="list-style-type: none"> • Additional energy cost of £11,000pa. • No payback on £3.5m CMS investment.
3.	As option 2 + inter-urban routes switched off between midnight & 5.30am.	Further reduction in carbon	<ul style="list-style-type: none"> • Further savings in energy costs of £72,000pa.

		emissions of 210tpa.	<ul style="list-style-type: none"> • 48 year payback on £3.5m CMS investment.
4.	<ul style="list-style-type: none"> • 7pm to 9pm dim to 75% • 9pm to midnight dim to 50% • Midnight to 5.30am switch off (as status quo) 	Further reduction in carbon emissions of 233tpa	<ul style="list-style-type: none"> • Further savings in energy costs of £80,000pa. • 44 year payback on £3.5m CMS investment.

5.15 Although fear of crime “complaints” linked to street lighting are minimal, it is recognised that there may be vulnerable residents for whom this is a potential issue.

5.16 Where fear of crime issues are linked to night time lighting switch persist then options involving collaboration between the Authority’s Community Safety Team and Gwent Police can be considered to include advice relating to the purchase and installation of a home burglary pack and ring doorbell combined with a home visit to review security and provide reassurance to the resident.

6. ASSUMPTIONS

6.1 The financial implications (both in terms of savings and costs) are based on confirmed energy prices at 2021/22 rates. It is assumed that energy prices will at least double throughout the remainder of 2022/23 and into 2023/24

7. SUMMARY OF INTEGRATED IMPACT ASSESSMENT

7.1 As this report is a review of an existing policy which recommends the status quo, a new IAA has not been required.

8. FINANCIAL IMPLICATIONS

8.1 The switch to LED and PNL (the status quo) has resulted in cost savings of £1,160,000 at current prices. However, when considering the feedback from the public sector energy procuring organisation (Crown Commercial Services) it is likely that this saving will be circa £2,000,000 as a result of their energy price rise predictions as we move into the second half of the 2022/23 and the 2023/24 financial year (where the predictions are for price rises of circa 170%)

The table below illustrates the effect of the current strategy on street lighting energy costs:

Cost (at current prices) prior to PNL/LED	£1,710,00
Cost (at current prices) post PNL/LED	£550,000
SAVING	£1,160,000

Street lighting energy price rises are predicted to increase all of the above figures by 170%

9. PERSONNEL IMPLICATIONS

- 9.1 There are no personnel implications associated with this report.

10. CONSULTATIONS

- 10.1 The Street Lighting Review was considered by the Environment and Sustainability Scrutiny Committee on Tuesday 25th October, 2022.

The Cabinet member for Highways and Transportation introduced the report.

The Cabinet Member for Prosperity, Regeneration & Climate Change then asked members of the Scrutiny Committee to consider the fact that this Council declared a climate emergency in June 2019. He argued the reduction in carbon emissions is a commitment to the prevention of the long-term threat of climate change to which energy reduction plays a key role. The Cabinet Member asked whether, in the face of a climate emergency, and at a time when the general public is actively reducing their own personal electricity and energy, it would be wise for members to support extra lighting during the hours of 12 midnight to 5:30am.

One Member offered the view that part night-lighting was implemented for financial not environmental reasons and that the Police and Crime Commissioner for Gwent had expressed a personal opinion in a recent media article that streetlights should remain on at night. The member also questioned the validity of a county-wide policy in relation to street lighting.

One Member advocated adopting a Central Management System for streetlights like some neighbouring Local Authorities had, he also highlighted safety concerns around reports that sometimes the lighting did not come back on at 5:30am as planned and he also observed that on long terraced streets midpoint lighting should be provided during the hours of darkness. The Member also highlighted how the Rhymney area had received Safer Streets funding specifically for street lighting. The Member wished to know where this money had gone.

One Member observed that adopting a Central Management System would allow the Council to be more creative in terms of exploring dimming options, highlighting safety concerns for vulnerable people associated with the part night-lighting scheme and questioned if further options beyond midnight to 5:30am could be explored such as switching lights off for shorter periods during the night.

One Member questioned the environmental aspect highlighted in the report as all energy to power street lighting across the County Borough came from renewable sources. The Member was of the view that the current policy was only implemented for financial reasons.

In response, the Corporate Director stated that, even though we use green / renewable energy, we don't get the associated benefits when reporting our carbon emissions back to Welsh Government. When we report, there is still a carbon emissions factor associated with our consumption which has to be reported and an implied assumption that we are not using green energy, the intention being to encourage Councils to work harder at decarbonisation. Where any of our electricity passes through a metre for a commercial supply there is a consequential carbon

implication and we are expected to log that electricity in our carbon reporting as though it is not from a renewable source.

If we were to revert back to switching the lights on, apart from the increase in costs, it would create additional electrical demand on the grid. At times when renewables are not able to meet this demand, this could result in electricity being generated from fossil fuel sources such as gas power stations or nuclear. In view of the above, if our streetlights were switched back on between midnight and 5.30 am then the result would be an increase in carbon emissions of circa 470 tonnes per annum which we would need to report to Welsh Government.

One Member highlighted that residents could explore buying personal head torches and solar powered lighting for their properties if they had any concerns regarding the current policy.

One Member asked a question on antennas on top of street lighting columns within the County Borough which if operational would allow dimming by a management system allowing some light and reducing the carbon footprint. The Head of Infrastructure advised that the installation of a Central Management System (CMS) would cost circa £3.5M and have a payback of approximately 40 years depending on the option chosen. He also highlighted how the nodes currently on columns are designed to regulate switch on/off times and not dimming options.

The Head of Infrastructure also highlighted the way that renewable (solar) energy can be stored and utilised at different times of day and night along with some minor irregularities in the switching times during the time when the clocks go forward or back one hour during the Autumn and Springtime.

It was also explained that the current policy allows for streetlights to be turned back on following the regular review and consultation that is undertaken between officers and Gwent Police colleagues should there be a clear evidence base. Examples were provided and are highlighted within the report and it was also emphasised that the evidence to date is that there is no increase of crime as a result of the part night lighting policy.

The Head of Infrastructure further explained that the levels of complaint from residents in regard the part night light policy is exceptionally low.

One Member observed that a measured approach where certain streets / areas could be switched on at night rather than the current County Borough wide policy would also reduce our carbon footprint and increase night-time safety on streets.

A Member proposed a Motion that the recommendations be amended to include: ***“Cabinet is asked to review the Street Lighting Policy and look at implementing the Central Management System so that the policy is fit for purpose.”*** This was seconded by another Member and a vote was taken by means of roll call. In noting that there were 9 votes FOR and 5 votes AGAINST, the amendment was agreed by a majority of Members present.

Committee Members were advised that the amendment negated recommendation 3.1 above – that “the existing street lighting policy is maintained.” Having noted the content of the report, it was moved and seconded that the following recommendation be forwarded to Cabinet for approval. By way of Microsoft Forms (and in noting there were 12 for, 2 against and 0 abstentions) this was agreed by the majority present.

The Scrutiny committee therefore recommended to Cabinet that:

1. Cabinet Members are asked to review the Street Lighting Policy and look at implementing the Central Management System so that the policy is fit for purpose.

2. Officers continue to work with their colleagues in Gwent Police in accordance with the existing, agreed protocol relating to crime.

3. Issues relating to fear of crime are recognised by the Authority and where these issues are considered to be serious, taking account of the vulnerability of the complainant then an individual response is offered through the Community Safety Partnership which will include a number of wider interventions, such as security advice and guidance.

10.2 The report reflects the views of the other listed consultees.

11. STATUTORY POWER

11.1 Local Government Acts

11.2 Highways Act 1980 and associated Codes of practice/British Standards.
